If you don't have any RubyGems installed, there is still the pre-gem approach to getting software, doing it manually:

1. [Download from above](#) (ZIP)
2. Unpack into a directory and `cd` there – **C: eða þar sem “Ruby22-x64” mappan er**

3. Install with: **ruby setup.rb** (you may need admin/root privilege)

Ruby Interactive (ri) documentation was installed. ri is kind of like man
pages for ruby libraries. You may access it like this:
  ri Classname
  ri Classname.class_method
  ri Classname#instance_method
If you do not wish to install this documentation in the future, use the
--no-document flag, or set it as the default in your ~/.gemrc file. See
'gem help env' for details.
